M2 Enjeux du Spatial et nouvelles Applications - Newspace

Master's degree

Specialisation Earth and Planetary Sciences, Environment (STePE)

Enrolment type

Formation initiale

Formation continue

Language(s) of instruction

French

Working in the Space market is "not rocket science": develop your skills in innovative satellite design over a 1-year program to enter the Space Ecosystem! Discover the ["Master 2 Newspace"](#) program at Paris Saclay University.

Working in the Space market is "not rocket science": develop your skills in innovative satellite design over a 1-year program to enter the Space Ecosystem! Discover the ["Master 2 Newspace"](#) program at Paris Saclay University.

Develop in just 1 year cross-disciplinary skills in space mission, instrument and satellite design within a cutting-edge training program based on pedagogical innovation (*serious games, inverted classroom, multiple application modules*), learning by doing (*hands-on labs, field-trips*) and by projects (2 "*project*" teaching units), and the link to research (*Applied Research Thesis*).

Présentation

Skills

Accurately distinguish the different phases, stages, stakeholders, and challenges of a space mission within the framework of a scientific instrumental mission.

Design a space mission across all departments (payload, satellite platform, orbital mechanics, telecommunications, phases, projects, budgets, data analysis).

Design, manipulate, and pilot satellite subsystems during integration and qualification phases (AIT/AIV).

Develop complex project skills (technically complex projects, large teams, long duration, parallel projects) specifically in the space ecosystem.

Objectives

This programme stems from the STePE (Earth and Planetary Science, Environment) global Masters Programme. It aims to provide knowledge of the entire design process of a satellite, from the payload concept to the exploitation of data during flight in order to meet market demands and new professions linked to emerging applications (satellite miniaturization, Cubesats, satellite fleets, drones, etc.). This Masters programme is therefore strongly oriented towards the quality of observation and data by providing a better understanding of the emergence of instrumental concepts, AIT/AIV approaches (integration and testing), data analysis and validation of final products. It integrates phases of practical examples in the form of team projects tutored on concrete cases (Learning by doing), several serious games, and an internship in a company or laboratory. This training aims to meet the needs of the private sector and Space public research laboratories but can also lead to PhDs, ideally within the framework of CIFRE scholarships (public/private funding) due to the significant needs concerning innovation in this sector.

Débouchés

Career prospects

Design engineer in the industrial sector

Design engineer in the research / scientific sector

Design engineer industry / public research

Research & Development Engineer

Research Engineer

Design Engineer

Development engineer

Head of project/mission

Further Study Opportunities

PhD thesis

Specialised Master's programmes (MBA in Project Management, Business, and Innovation Management in the Bio-industries)

Engineering, research and development

Head of project/mission

Admission

Capacity

Available Places

20

Target Audience and Entry Requirements

Master's degrees in Physics, Chemistry, Mathematics, Earth Sciences, Engineering, Geoinformation, Data Science, Computer Science/AI/ML.

All engineering backgrounds accepted.

We accept certain non-scientific profiles:

- returning to studies
 - geography, communication, political science, defense and security, economics, business management, etc.
- depending on the quality of the applications and the maturity of the professional project.

Période(s) de candidature

Inception Platform

From 15/01/2026 to 31/07/2026

Supporting documents

Compulsory supporting documents

Motivation letter.

All transcripts of the years / semesters validated since the high school diploma at the date of application.

Curriculum Vitae.

Additional supporting documents

VAP file (obligatory for all persons requesting a valuation of the assets to enter the diploma).

Supporting documents :

- Residence permit stating the country of residence of the first country

- Or receipt of request stating the country of first asylum
- Or document from the UNHCR granting refugee status
- Or receipt of refugee status request delivered in France
- Or residence permit stating the refugee status delivered in France
- Or document stating subsidiary protection in France or abroad
- Or document stating temporary protection in France or abroad.
