Présentation

Objectives

The master is primarily intended for pharmacy students. It will allow them to apply for positions in charge of regulatory affairs in the healthproducts industry or predominantly regulatory positions within health authorities.

- Students, once graduated, must master all the regulations applicable to the health industries, as well as the status of various health products.
- Students must be able to apply their regulatory knowledge to specific cases likely to arise in the pharmaceutical, cosmetic or medical device industry. This requires a good legal mastery but also a perfect knowledge of all activities developed within a regulatory affairs department which deploys a cross-cutting activity. Teaching in the form of lectures, conferences and projects will aim to transmit to students not only knowledge but also interpersonal skills to evolve in a service with multiple

interactions.

Calendar
