

# COPYRIGHT AND INTELLECTUAL PROPERTY

As the author, you hold the copyright and you have full responsibility for the content of your thesis.

In order to best promote your work, please make sure to follow these guidelines:

## Avoid plagiarism and cite your sources

You thus ensure that:

- your thesis is an original work
- you follow guidelines of ethical research

This will also allow readers to easily identify your sources

## If your thesis includes submitted, to-be-submitted, or published papers

- Please check the journal's Open Access policy on: [www.sherpa.ac.uk/romeo/](http://www.sherpa.ac.uk/romeo/)
- Make sure you get any necessary authorization from your co-authors

## Loi pour une république numérique (French Law for a Digital Republic)

If one or more parts of your thesis have been published in a scientific journal, you have the right to make a preprint freely available in an Open Archive repository, even if you have given exclusive copyright of the paper to the publisher:

- If your publisher has already made available the final version for free
- Or after an embargo period (up to 6 months after publication for papers in STEM, and up to 12 months after publication for papers in the Humanities)

This only applies if 50% or more of your research has been financed by French or EU public funds.

## You can disseminate your work under a Creative Commons License

A Creative Commons License is a type of public copyright license that allows you to choose how you want other people to share and use your work.

Learn more at: <https://creativecommons.org/>

Publishing papers under a CC license also allows you to retain your rights as an author instead of transferring them to a publisher: « [Implementing the rights retention strategy for scientific publications](#) »

## Using copyrighted images

- Cite the sources of the images
- You cannot modify copyrighted images

## Think about your dissemination options

See the "Dissemination of a thesis" sheet
