**The European
University
Alliance for
Global Health**

Co-funded by
the European Union

About EUGLOH

The European University Alliance for Global Health (EUGLOH) unites nine universities from across Europe. One of the Alliance's main goals is to create an interconnected campus. Travel opportunities accompanied by common infrastructure developments will lead to the creation of one European University campus where students and staff can move seamlessly between institutions for study and work.

Opportunities

For students

Courses, workshops, summer schools, internships and conferences – online, hybrid and in-person. Long- and short-term international experiences abroad and at home.

For academics & researchers

Transnational exchange and cooperation with international researchers across disciplines, building towards joint programmes and research projects. Joint Doctoral Supervision programmes, Guest Lecturer Programme, and more.

For admin staff

International experiences through staff weeks, job shadowing and courses to expand intercultural skills and share best practices.

EUGLOH is...

...unique because of its extensive expertise in research and innovation at the nine member universities. As part of the European Commission's European Universities Initiative, the Alliance is promoting European values in words and action. Transnational exchange and cooperation among students, staff, and researchers is at the heart of EUGLOH.

For You

EUGLOH conceives of Global Health as a comprehensive concept covering everything from social sciences, to arts and humanities, to medicine and life sciences. This transdisciplinary approach serves to include the whole of our university communities in addressing the complex societal challenges in health and well-being that affect us all.
