

## Postdoc position in condensed matter physics at the Niels Bohr Institute (Copenhagen)

The Niels Bohr Institute (University of Copenhagen) is currently seeking a Postdoc in theoretical condensed matter physics, who will work in the team led by Michele Burrello within the condensed matter theory group of the Center for Quantum Devices (QDev).

The research project is focused on the modelling of topological phases of matter, with the aim of designing platforms for the creation and manipulation of non-Abelian anyons.

Particularly welcome are candidates with former experience in the study of strongly-correlated solid state or ultracold atom models.

The appointment duration is two years, with a flexible starting date.

All applications should be submitted electronically on the following website, where you can find further information: <https://employment.ku.dk/faculty/?show=153689>

Deadline: 01 May, 2021.
